**Pipeline Equipment, Inc.**

# LAUNCHERS & RECEIVERS

Pipeline Equipment, Inc. has extensive experience designing and fabricating Pig Launcher and Receiver systems. We offer many configurations including horizontal, vertical, or sloped ranging from a simple launcher and receiver to complete skid mounted units with all valves and associated piping. Each configuration is designed to meet the customer's specific application in compliance with applicable codes and material specifications.

Most pipelines must be pigged to either clean the pipeline for flow improvement and corrosion control, batch different products, displace certain products, or inspect the line for integrity assurance. The primary purpose of a pig launcher and receiver is to allow the launching or receiving of a pipeline pig without interrupting the flow.

## BENEFITS OF WELL DESIGNED LAUNCHER & RECEIVER SYSTEMS

- Safety features which eliminate accidents
- Reduced operation and field installation cost
- Easier launching and receiving process
- Consistency in launching and receiving procedures and operator qualifications
- Assurance that the unit is in compliance with applicable codes and standards

# AUTOMATED LAUNCHERS & RECEIVERS

In addition to standard units with manual controls, PEI also provides automated units which significantly reduce manpower, valve maintenance, gas releases, and HSE concerns. For rich wet gas systems that require routine pigging to increase production and remove valuable liquids, PEI offers the Automatic Spherical Pig System which holds multiple spherical pigs that can be released locally, on a timed basis, or remotely. Cleaning, Batching, and Inspection Pigs can also be launched and received in the automated systems.

## PIGS

PEI offers a complete line of pigs for all pigging applications:

SPHERICAL PIGS

MULTI-SEAL PIGS

TUFF CAST PIGS

BIDI PIGS

CONICAL FLEX PIGS

FOAM PIGS
